## Getting the Photran 5.0 Sources from CVS

BEFORE YOU BEGIN: Make sure you are running **Eclipse 3.5** (Galileo) and a **Java 5** or later JVM. We recommend the Eclipse for RCP/Plug-in Developers Package.

## Part I. Check out the CDT 6.0 sources from CVS

- 1. In Eclipse, switch to the CVS Repository Exploring perspective.
- 2. Right-click the CVS Repositories view; choose New, Repository Location
- 3. In the dialog box, enter the following information, then click Finish.

Host name: dev.eclipse.org Repository path: /cvsroot/tools Username: anonymous Password: (no password)

Connection type: pserver

- 4. In the CVS Repositories view
  - Expand ":pserver:anonymous@dev.eclipse.org:/cvsroot/tools"
  - Then expand "HEAD"
- 5. Right-click on "org.eclipse.cdt"
- 6. Select "Configure Branches and Versions..."
- 7. Under "Browse files for tags", expand "all", then expand "org.eclipse.cdt", then click on the .project file
- 8. Under "New tags found in the selected files", click on the Deselect All button, then check cdt\_6\_0 in the list above it
- 9. Click Add Checked Tags
- 10. Click OK
- 11. Now, in the CVS Repositories view
  - Expand ":pserver:anonymous@dev.eclipse.org:/cvsroot/tools"
  - Then expand "Branches"
  - Then expand "cdt\_6\_0"
  - Then expand "org.eclipse.cdt cdt\_6\_0"
  - Then expand "all"

- 12. Click on the first entry under "all" (it should be org.eclipse.cdt), then shift-click on the last entry under "all" (it should be org.eclipse.cdt.ui.tests). All of the intervening plug-ins should now be selected. Right-click on any of the selected plug-ins, and select Check Out from the pop-up menu. (Check out will take several minutes.)
- 13. You now have the CDT source code. Make sure it compiles successfully (lots of warnings, but no errors).

## Part II. Check out the Photran sources from CVS

- 14. Under ":pserver:anonymous@dev.eclipse.org:/cvsroot/tools," expand HEAD, then expand org.eclipse.ptp, then expand photran
- 15. Click on the first entry under "photran" (it should be org.eclipse.photran-dev-docs), then shift-click on the last entry under "photran" (it should be org.eclipse.rephraserengine.ui.vpg). All of the intervening plug-ins should now be selected. Right-click on any of the selected plug-ins, and select Check Out from the pop-up menu. (Check out will take several minutes.)

The sources should all compile (albeit with lots of warnings).

## Part III. Running the test cases

- 16. In Package Explorer view, select the org.eclipse.photran.core.vpg.tests project.
- 17. Right-click on that project and select Run As > Run Configurations.... A dialog will appear.
- 18. In that dialog, create a new JUnit Plug-in Test launch configuration. Call it "Photran-Tests".
- 19. For the configuration that you have just created, switch to the "Environment" tab and create a new variable called "TESTING" with a value of 1.
- 20. Select "Run" to run the tests. To run the tests again, just launch the "Photran-Tests" configuration from the Eclipse Run menu.

**Note.** Some JUnit tests for the parser and refactoring engine require closed-source code that is not available in CVS. A warning will appear in the JUnit runner if this code is not available.
