# The Eclipse Parallel Tools Platform
and Scientific Application Development

Craig Rasmussen, LANL   crasmussen@lanl.gov
Beth Tibbitts, IBM   tibbitts@us.ibm.com
Greg Watson, IBM   g.watson@computer.org

OSCON July 2007

parallel tools platform
http://eclipse.org/ptp

---

parallel tools platform
http://eclipse.org/ptp

Tutorial Outline / Schedule

Time	Module	Topics	Presenter
1:30-1:45	1. Overview of Eclipse and PTP	An understanding of the overall Eclipse and PTP architecture	Beth/Craig
1:45-2:15	2. Introduction to the Eclipse IDE	Basic features of the Eclipse IDE, incl. building, running and debugging a sample application	Craig Rasmussen
2:15-3:00	3. Advanced Development	Version Control, Bookmarks, Task Tags, Refactoring, Search	Craig Rasmussen
3:00-3:30	Break	Optional: Install eclipse on student laptops	
3:30-4:00	4. PTP and Parallel Language Development Tools	Introduction to PTP and MPI & OpenMP tools	Beth Tibbitts
4:00-4:30	5. Parallel Debugging	Eclipse parallel debugger	Beth Tibbitts
4:30 - 5:00	6. Eclipse and the Enterprise; related info	Further information about Eclipse, PTP and related tools	Beth & Craig

A word on versions…

✦ Note: PTP core currently supports CDT version 3.1.x, which requires Eclipse 3.2.x. (2006)

✦ Eclipse 3.3 and CDT 4.0 were released in June 2007, and CDT 4.0 provides many enhancements over CDT 3.1

✦ The slides in this tutorial
  ✦ describe CDT 4.0 for PLDT and CDT-only features
    ✦ So that you see the latest features!
  ✦ PTP core (runtime, debugger) won't support CDT 4.0 until late '07 or early '08. Its features described here won't change significantly, however.

OSCON July 2007

2

Module 1: Overview of Eclipse and PTP

✦ Objective
  ✦ To introduce participants to the Eclipse platform and PTP

✦ Contents
  ✦ History
  ✦ What is Eclipse?
  ✦ Who is using Eclipse?
  ✦ What is PTP?

History

✦ Originally developed by Object Technology International (OTI) and purchased by IBM for use by internal developers

✦ Released to open-source community in 2001, managed by consortium
  ✦ Eclipse Public License (EPL)
  ✦ Based on IBM Common Public License (CPL)

✦ Consortium reorganized into independent not-for-profit corporation, the Eclipse Foundation, in early 2004
  ✦ Participants from over 100 companies

Eclipse Foundation

✦ Board of Directors drawn from four classes of
membership:
  ✦ Strategic Developers, Strategic Consumer, Add-in
    Providers, and Open Source project leaders
✦ Full-time Eclipse management organization
✦ Councils guide the development done by
Eclipse Open Source projects
  ✦ Requirements
  ✦ Architecture
  ✦ Planning
✦ Currently 9 projects and over 50 subprojects

---

Members of Eclipse
June 2007

✦ 162 members in June '07 (130 in March 2006)
  ✦ 21 strategic members (16 in June 2006)
✦ 794 committers, representing 48 organizations

2

What is Eclipse?

✦ A vendor-neutral open source development platform
✦ A universal platform for tool integration
✦ Plug-in based framework to create, integrate and utilize software tools

---
Equinox

✦ OSGi framework implementation model
  ✦ Formerly known as the Open Services Gateway initiative
  ✦ Standard for application lifecycle management
✦ Provides the most fundamental Eclipse infrastructure
  ✦ Plug-ins (known as a bundle)
  ✦ Bundle install, update and uninstall
  ✦ Bootstrap and launching
  ✦ Extension registry
✦ Introduced in Eclipse 3.0

3

Platform

✦ Core frameworks and services with which all plug-in extensions are created
✦ Represents the common facilities required by most tool builders:
  ✦ Workbench user interface
  ✦ Project model for resource management
  ✦ Portable user interface libraries (SWT and JFace)
  ✦ Automatic resource delta management for incremental compilers and builders
  ✦ Language-independent debug infrastructure
  ✦ Distributed multi-user versioned resource management (CVS supported in base install)
  ✦ Dynamic update/install service

Plug-ins

✦ Java Development Tools (JDT)
✦ Plug-in Development Environment (PDE)
✦ C/C++ Development Tools (CDT)
✦ Parallel Tools Platform (PTP)
✦ Test and Performance Tools Platform (TPTP)
✦ Business Intelligence and Reporting Tools (BIRT)
✦ Web Tools Platform (WTP)
✦ Data Tools Platform (DTP)
✦ Device Software Development Platform (DSDP)
✦ Many more…

Who is using Eclipse?

✦ Commercial tool developers
  ✦ Accelerated Technology, Catalyst Systems, Codign Software, Compuware Corp, Exadel, HP, ILOG, IBM, Intel, Lattix, Mentor Graphics, Monta Vista, MySQL, Novell, Palm, QNX, Wind River
✦ Commercial application developers
  ✦ Actuate, Applied Biosystems, Bay Breeze Software, BSI, Crypto Intelligence, DeltaLearn, eClarus Software, EzMgt, Future Management, IBM, Incremental, Infonoia, iMEDIC, Innovation Gate, ITscope, Market Contours, nulogy, Recursa Software, Redbird Software, RPC Software, ForeFlight, SkyWalker Software, SnapXT, Sphere Networks, Third Brigade
✦ Commercial application users
  ✦ Adobe, Agence France Press, AlterPoint, Bank SinoPac, City of Stuttgart, Compass Group, DailmerChrysler, NASA JPL, Plum Canary, Refractions Research, RSS Solutions, SAS

Module 1   OSCON July 2007   1-8

What is PTP?

✦ The Parallel Tools Platform aims to provide a highly integrated environment specifically designed for parallel application development
✦ Features include:
  ✦ An integrated development environment (IDE) that supports a wide range of parallel architectures and runtime systems
  ✦ A scalable parallel debugger
  ✦ Parallel programming tools (MPI/OpenMP)
  ✦ Support for the integration of parallel tools
  ✦ An environment that simplifies the end-user interaction with parallel systems

Module 1   OSCON July 2007   1-9

Module 2: Introduction to the Eclipse IDE

✦ Objective
  ✦ Gain an understanding of how to use Eclipse to develop applications
✦ Contents
  ✦ Brief introduction to the Eclipse IDE
  ✦ Create a simple application
  ✦ Run and debug simple application

# Specifying A Workspace

✦ Eclipse prompts for a workspace location at startup time
✦ The workspace contains all user-defined data
 ✦ Projects and resources such as folders and files

The prompt can be turned off

Workspace Launcher

Select a workspace

Eclipse SDK stores your projects in a folder called a workspace.
Choose a workspace folder to use for this session.

Workspace: /home/:utnn/workspace   Browse...

☐ Use this as the default and do not ask again

OK   Cancel

1

Eclipse Welcome Page

✦ Displayed when Eclipse is run for the first time

Select "Go to the workbench"
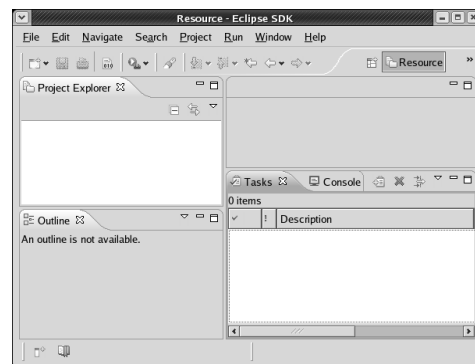

Module 2   OSCON July 2007   2-2

Workbench

✦ The Workbench represents the desktop development environment
  ✦ It contains a set of tools for resource management
  ✦ It provides a common way of navigating through the resources
✦ Multiple workbenches can be opened at the same time

Module 2   OSCON July 2007   2-3

Workbench Components

✦ A Workbench contains perspectives
✦ A Perspective contains views and editors

perspective

editor

views

Perspectives

✦ Perspectives define the layout of views in the Workbench
✦ They are task oriented, i.e. they contain specific views for doing certain tasks:
  ✦ There is a Resource Perspective for manipulating resources
  ✦ Make Perspective for manipulating compiled code (C/C++, Fortran)
  ✦ Debug Perspective for debugging applications
✦ You can easily switch between perspectives

Switching Perspectives

✦ You can switch
Perspectives by:
  ✦ Choosing the
    **Window▸Open
    Perspective** menu
    option
  ✦ Clicking on the
    Open Perspective
   button
  ✦ Clicking on a
    perspective shortcut
    button

Available Perspectives

✦ By default, certain
perspectives are available
in the Workbench

✦ We've also installed C/C++
and Fortran perspectives

Open Perspective

- C/C++
- CVS Repository Exploring
- Debug
- Fortran
- Java (default)
- Java Browsing
- Java Type Hierarchy
- Plug-in Development
- PTP Debug
- PTP Runtime
- Rescurce
- Team Synchronizing

OK   Cancel

Customizing Perspectives

✦ Items such as shortcuts, menu items and views may be customized
  - ✦ **Window▸Customize Perspective...**
✦ Rearrange views by dragging
  - ✦ Try moving the outline view
✦ Save changes
  - ✦ **Window▸Save Perspective As...**
✦ Close Perspective
  - ✦ Right-click on perspective title and select **Close**
✦ Reset Perspective
  - ✦ **Window▸Reset Perspective** resets the current perspective to its default layout

---

Views

✦ The main purpose of a view is:
  - ✦ To provide alternative ways of presenting information
  - ✦ For navigation
  - ✦ For editing and modifying information
✦ Views can have their own menus and toolbars
  - ✦ Items available in menus and toolbars are available only in that view
  - ✦ Menu actions only apply to the view

Stacked Views

✦ Stacked views appear as tabs
✦ Selecting a tab brings that view to the foreground
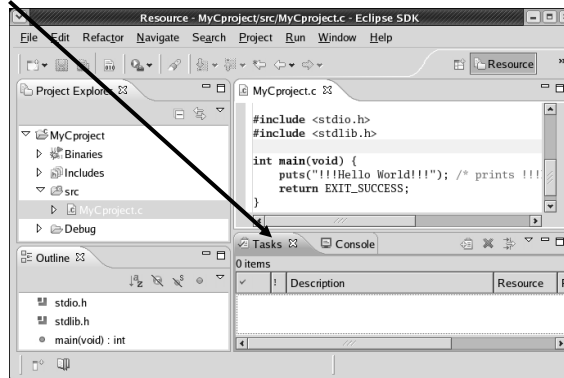

Project Explorer View

✦ Represents user's data
✦ It is a set of user defined resources
   ✦ Files
   ✦ Folders
   ✦ Projects
      ✦ Collections of files and folders
      ✦ Plus meta-data
✦ Resources are visible in the Project Explorer View
Opening a New View

✦ To open a view:
  ✦ Choose **Window ▸ Show View ▸ Other…**
  ✦ The **Show View** dialog comes up
  ✦ Select the view to be shown
  ✦ Select **OK**

Module 2   OSCON July 2007   2-12

Fast Views (1)

✦ Hidden views that can be quickly opened and closed
  ✦ They take up space in the Workbench
✦ Fast views can be created by:
  ✦ Dragging an open view to the shortcut bar
  ✦ Selecting **Fast View** from the view's menu
✦ A Fast View is activated by clicking on its **Fast View** button

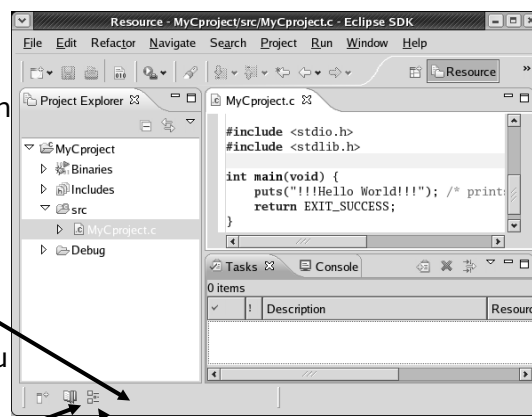

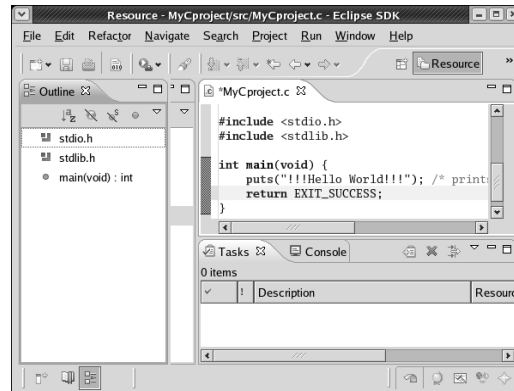

Outline view has been hidden in the shortcut bar

Module 2   OSCON July 2007   2-13

7

Fast Views (2)

✦ Clicking on the Fast View opens the view in the current perspective

✦ Clicking outside of the view makes it hidden again

✦ Turn off the Fast View by selecting **Fast View** from the view's menu again

---

Editors

✦ An editor for a resource opens when you double-click on a resource

  ✦ Editor type depends on the type of the resource, for example .c files are opened with the C/C++ editor

  ✦ When an editor opens on a resource, it stays open across different perspectives

  ✦ An active editor contains menus and toolbars specific to that editor

  ✦ When you change a resource, an asterisk on the editor's title bar indicates unsaved changes

8

Preferences

✦ Preferences provide a way for you to customize your Workbench
  ✦ By selecting **Window▶Preferences…**
✦ For example:
  ✦ Use Emacs bindings
  ✦ Modify editor folding defaults
    ✦ E.g., fold all macro definitions
  ✦ Associate file types with file extensions
    ✦ E.g., *.f03 with the Fortran editor
  ✦ Toggle automatic builds
  ✦ Change key sequence shortcuts
    ✦ E.g., Ctrl+/ for Comment

Help

✦ Access help
  ✦ **Help▶Help Contents**
  ✦ **Search**
  ✦ **Dynamic Help…**
✦ What's there…
✦ Context sensitive help…

9
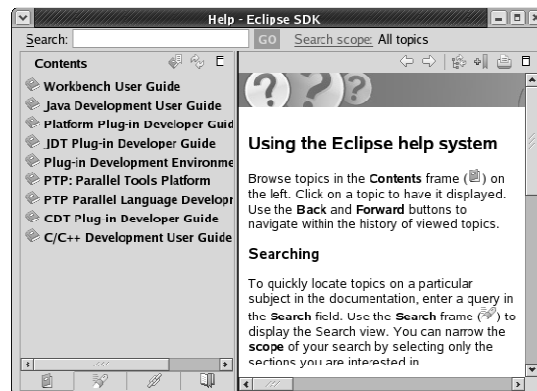

A Simple Application

- ✦ Create a C Project
- ✦ Add files
    - ✦ Source files (ending in .c)
    - ✦ A makefile is automatically created
- ✦ Build application
    - ✦ Done automatically
- ✦ Debug application
    - ✦ Create a Debug Configuration

CDT Projects

- ✦ A Project contains the resources of an application
- ✦ Resources are visible in Navigator or C/C++ Projects View
- ✦ Project Type is very **important**
    - ✦ Selects project builder (linker)
    - ✦ C++, Fortran, or C

Creating a C Project

✦ Create a project (in C/C++ Perspective)
  ✦ **File▸New▸ C Project**
  ✦ Or select **New Project** button
✦ Give it a name: e.g. Integrator
✦ Select Project Type (or default is OK)
  ✦ **Next>**
✦ On **Select Configurations** page, click "Advanced Settings" to see Project properties
✦ Select **Finish**

Select Configurations
Select platforms and configurations you wish to deploy on

Project type: Executable
Tool-chains: Linux GCC
Configurations:
☑ ⚙Debug
☑ ⚙Release

Select all
Deselect all

Advanced settings...

Use "Advanced settings" button to edit project's properties.

Additional configurations can be added after project creation.
Use "Manage configurations" buttons either on toolbar or on property pa

⑦   < Back   Next >   Finish   Cancel

Module 2   OSCON July 2007   2-20

Creating a C Project
CDT 3.1

✦ Terminology is a bit different from CDT 4.0…

✦ CDT (C/C++ Development Tools) 3.1 project types:
  ✦ Managed Make
  ✦ Standard Make
✦ To create a project (in C/C++ Perspective)
  ✦ **File▸New▸Managed Make C Project**
  ✦ Or select **New Project** button
✦ Give it a name: Integrator
  ✦ **Next>**
✦ Select Project Type
  ✦ **Next>**
✦ On Indexer tab, select **Full C/C++ Indexer**
✦ Select **Finish**

Module 2   OSCON July 2007   2-21

11

Add Resources

✦ Import existing files from file system
  ✦ Right-click on project, select **Import...**
  ✦ Under **General**, select **File System** then **Next**
  ✦ Input **From directory:** using **Browse...**
  ✦ Select **samples** folder from PTP tutorial CD; then **OK**
  ✦ Check **linear_function.c** and **integrator.c**
  ✦ Select **Finish**
✦ Can also create new source files
  ✦ **File ▸ New ▸ Source File**

Fix Error in File

✦ Project fails to build
  ✦ Note red icon on filename
✦ Click on **Problems** View tab
✦ Fix error in **linear_function.c**
  ✦ Double-click on the file in the **C/C++ Projects** view to open an editor
✦ Save file; project will automatically rebuild when file is saved
  ✦ **File ▸ Save** (or Ctrl-S)
  ✦ If project doesn't build automatically, select the build icon on the toolbar.
✦ Look at console view to see build progress
  ✦ There is still another error

12

Project Properties

✦ To fix the next error, add the GNU Scientific Library to the build process:

  ✦ Right-click on Project and select the **Properties** menu item
  ✦ Select the **C/C++ Build** item
    Under that, select the **Settings** item
  ✦ Select **GCC C Linker ▸ Libraries** from the **Tool Settings** tab
    ✦ Click on the **'+'** icon next to **Libraries (-l)** to add the library
    ✦ Enter 'gsl' in the dialog box and select **OK**
  ✦ Select **OK** to close the **Project Properties**

Module 2   OSCON July 2007   2-24

Launch Configuration

✦ A Launch Configuration is needed to run or debug an application
✦ To create a launch configuration:
  ✦ Select **Run ▸ Open Debug Dialog…**
    to specify details of running the application
  ✦ Or for quick launch:
    click arrow next to debug button, then **Debug As**
    ✦ Select **Local C/C++ Local Application**
  ✦ Switch to Debug Perspective if prompted

Module 2   OSCON July 2007   2-25

Debugging (1)

✦ Select **Yes** to confirm switching to the Debug Perspective after creating the launch configuration
✦ Set a breakpoint by double-clicking on the left vertical bar in the editor (at `sum = 0.0;` line)
✦ To continue running, click on **Resume** button
✦ Click on **Step Over** button until line with getRandomNumber()
✦ Click on **Step Into** button to enter getRandomNumber()

Debugging (2)

✦ Examine variables in Variables View
  ✦ Clicking on a variable will display its value
✦ Look at the result value in `getRandomNumber()`
✦ Click on the **Step Return** button
✦ Finish by clicking on the **Resume** or **Terminate** button

  Other things to try, if there's time:
✦ Add `printf()` to program
✦ Change variable name

14

Module 3: Advanced Development

✦ Objective
  ✦ Create and build a Standard Make Project from source files in CVS
✦ Contents
  ✦ Version control
  ✦ Standard Make Projects
  ✦ C/C++/Fortran
  ✦ Bookmarks, Task Tags
  ✦ Refactoring
  ✦ Searching

Module 3   OSCON July 2007   3-0

Version Control (CVS)

✦ Version control provided through the **Project Explorer View**, in the **Team** context menu
✦ Provides familiar actions:
  ✦ Commit…
  ✦ Update…
✦ Also less used tasks:
  ✦ Create/Apply Patch…
  ✦ Tag as Version
  ✦ Branch…
  ✦ Merge…
  ✦ Add to .cvsignore…

Module 3   OSCON July 2007   3-1

Add Repository Location

- ✦ Select **Window▶Open Perspective▶Other…**
- ✦ Select **CVS Repository Exploring** then **OK**
- ✦ Right-click in **CVS Repositories View**, then select **New▶Repository Location…**
- ✦ Fill out options
  - ✦ Host, repository path
  - ✦ Username and password
  - ✦ Connection type
- ✦ Select **Finish**

    Correction: Repository path: /cvsroot/chasm-interop

Add CVS Repository

Add a new CVS Repository
Add a new CVS Repository to the CVS Repositories view

Location
Host: chasm-interop.cvs.sourceforge.net
Repository path: /cvsroot/chasm

Authentication
User: developer_name
Password: ·········

Connection
Connection type: extssh
● Use default port
○ Use port:

☑ Validate connection on finish
☐ Save password
⚠ Saved passwords are stored on your computer in a file that is difficult, but not impossible, for an intruder to read.

Cancel   Finish

Checkout Chasm Code

- ✦ Open the repository, then open HEAD
  - ✦ Right-click on **chasm▶Check out As…**
  - ✦ Select **Finish**
  - ✦ Select **C▶C project**
  - ✦ Select **Next>**
- ✦ Enter **Project name** and **location**
  - ✦ Workspaces tend to be temporary so do not use default location
- ✦ Select **Finish**
- ✦ Switch to the **C/C++ Perspective**
- ✦ In Chasm Project **Properties**
  - ✦ Deselect Generate Makefiles automatically

Standard Make Project

✦ *Standard Make* projects are different from *Managed Make* projects
  ✦ Project Makefiles must be created
✦ Can create project Makefiles with the Makefile Editor
  ✦ Syntax highlighting and Outline view
✦ autoconf often used to create Makefiles for open source projects
  ✦ Must refresh after running configure script
✦ Refresh whenever file system is modified outside of Eclipse

---

Building Chasm code

✦ Most projects will now have to be configured
  ✦ This is project dependent
  ✦ Do whatever is needed from a terminal window, often ./configure
  ✦ This should create/configure all project Makefiles
  ✦ (We have already done this for you)
✦ Refresh the project to sync with file system
  ✦ Right-click on project and select **Refresh**

Building

✦ Create a Make Target
   named 'all'
   ✦ Right-click on the project in
      Make Targets View
   ✦ Select **Add Make Target**
   ✦ Select **Create**

Create a new Make target	✕

Target Name: |all|

Make Target
Make Target: |all|

Build command
☑ Use default
Build command: |make|

Build Setting
☐ Stop on first build error.
☑ Run all project builders.

| Create | Cancel |

Create a Bookmark

✦ A bookmark reminds you of useful information
✦ Add a bookmark by right-clicking in the gray
   border on left side of editor and select **Add
   Bookmark…**
   ✦ Provide a bookmark name, then select **OK**
✦ View bookmarks by selecting **Window▸Show
   View▸Other…**
   ✦ Open **General** and select **Bookmarks**

4

Create a Task Tag

+ Task tags are identifiers in C/C++ comments
+ TODO is a built-in task tag
+ Configure your own task tag in Window > Preferences
    + Under C/C++, select Task Tags

+ Add a Task tag by typing it in a source file comment
    + i=i+1 // TODO this is a task tag
+ The build locates task tags during compilation
+ View task tags in the Tasks View
    + If it's not shown, Window > Show View > Other... Open **General** and select **Tasks**

```
MySampleProject.c

/*
==================================================
Name        : MySampleProject.cpp
Author      : Beth
Version     :
Copyright   : Your copyright notice
Description : Hello World in C, Ansi-style,
    with  task tags e.g. MyTag like this
==================================================
*/

#include <stdio.h>
#include <stdlib.h>
// TODO this is a built-in task tag

int main(void) {
    MyTag a sample task tag
    puts("Hello World!!!"); /* prints Hello World!!! */
    return EXIT_SUCCESS;
}
```

```
Problems | Console | Properties | Tasks

Filter matched 3 of 8 items
          !  Description                      Resource      Path                    Location
             MyTag a sample task tag          MySamplePr... MySampleProject/src     line 17
             MyTag like this                  MySamplePr... MySampleProject/src     line 8
             TODO this is a built-in task tag MySamplePr... MySampleProject/src     line 14
```

Commit Changes

+ Select the **Projects Explorer** view
+ Notice the '>' before the file name(s)
    + Indicates a file has been modified
+ Right-click on the **chasm** Project
    + Select **Team▸Synchronize With Repository**
    + Confirm switch to perspective if asked
+ Expand the **chasm** folder
    + Double-click on a file name to view differences
+ Commit changes
    + Right-click on the file name, select **Commit...** and enter a comment
    + Select **Finish**

Advanced Features

✦ Refactoring
  ✦ Modifying source code without changing its external behavior
✦ Searching
  ✦ Based on languages elements, not just textual

Refactoring

✦ Rename
  ✦ Select **C/C++ Perspective**
  ✦ Open **src/compilers/GNU.c**
  ✦ Use **Outline View** to scroll to **setArrayDesc_GNU**
  ✦ Click in editor view on declaration of **rank**
  ✦ Select menu item **Refactor▶Rename**
  ✦ Change **rank** to **rank_renamed**
  ✦ Notice that change is semantic not textual
✦ Introduce Implicit None
✦ Constant promotion

Searching

- ✦ Language-based searching
- ✦ Search for Language Elements
  - ✦ e.g., C++ Class, Function, Method, Variable, Field, Namespace
- ✦ Limit search to Declarations, Definitions, References
- ✦ Type navigation
- ✦ Fortran
  - ✦ text based only for now

Type Navigation

- ✦ Choose **C/C++ Perspective**
- ✦ Select **Navigate ▶ Open Element...**
- ✦ Enter 'dope_vec' in text box
- ✦ All matching types are displayed
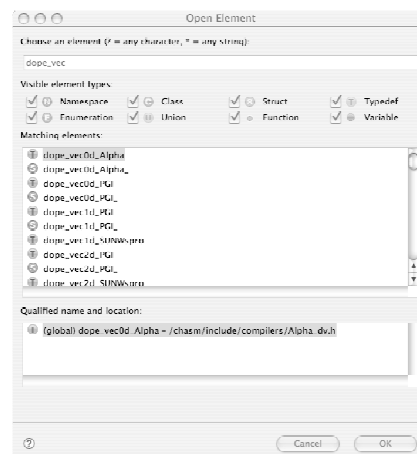

Module 4: PTP and Parallel Language Development Tools

✦ Objective
  ✦ Learn to develop and run a parallel program
✦ Contents
  ✦ Learn to use PTP's Parallel Language Development Tools
  ✦ Learn to launch a parallel job and view it via the PTP Runtime Perspective

---

Parallel Tools Platform (PTP)

✦ The Parallel Tools Platform aims to provide a highly integrated environment specifically designed for parallel application development
✦ Features include:
  ✦ An integrated development environment (IDE) that supports a wide range of parallel architectures and runtime systems
  ✦ A scalable parallel debugger
  ✦ Parallel programming tools (MPI/OpenMP)
  ✦ Support for the integration of parallel tools
  ✦ An environment that simplifies the end-user interaction with parallel systems
✦ http://www.eclipse.org/ptp

1

Parallel Language Development Tools (1)

✦ Features
  - ✦ Analysis of C and C++ code to determine the location of MPI and OpenMP Artifacts (Fortran soon)
  - ✦ "Artifact View" indicates locations of Artifacts found in source code
  - ✦ Navigation to source code location of artifacts
  - ✦ Content assist via **ctrl+space** ("completion")
  - ✦ Hover help
  - ✦ Reference information about the MPI and OpenMP calls via Help
    - ✦ **F1** on Windows
    - ✦ **ctrl-F1** on Linux
    - ✦ **Help** on Mac

Parallel Language Development Tools (2)

✦ More PLDT features:
  - ✦ OpenMP problems view of common errors
  - ✦ OpenMP "show #pragma region" action
  - ✦ OpenMP "show concurrency" action
  - ✦ MPI New project wizard automatically configures Managed Make MPI projects.

✦ Included in PTP 2.0
  - ✦ MPI Barrier analysis

A word on versions…

✦ Note: PTP core currently supports CDT version 3.1.x, which requires Eclipse 3.2.x. (2006)
✦ Eclipse 3.3 and CDT 4.0 were released in June 2007, and CDT 4.0 provides many enhancements over CDT 3.1
✦ The slides in this tutorial
  ✦ describe CDT 4.0 for PLDT and CDT-only features
    ✦ So that you see the latest features!
  ✦ PTP core (runtime, debugger) won't support CDT 4.0 until late '07 or early '08. Its features described here won't change significantly, however.

Terminology

✦ In CDT 3.1 there were two distinct types of C/C++ projects
  ✦ Managed Make project – CDT handles the makefile and build process
  ✦ Standard Make project – "bring your own" makefile

✦ In CDT 4.0 there is a single project type
  ✦ A "C Project" or "C++ project"
  ✦ In the project creation you can select "Makefile project" if you want to "bring your own."
    ✦ Otherwise we consider it a "Managed Make" project
    ✦ We will still use the old terminology at times.

parallel tools platform
http://eclipse.org/ptp

PLDT Preferences

✦ To use the PTP Parallel Language Development Tools feature for MPI development, you need to
  ✦ Specify the MPI include path
  ✦ Specify the MPI build command
✦ Open
  Window▸Preferences...
  ✦ Open the **PTP** item [if PTP is installed]
  ✦ Open the **Parallel Language Development Tools** item
  ✦ Select **MPI**
  ✦ Select **New...** to add MPI include path
✦ If running OpenMP, add its include file location here too

Module 4　　　　　OSCON July 2007　　　　　4-6

---

parallel tools platform
http://eclipse.org/ptp
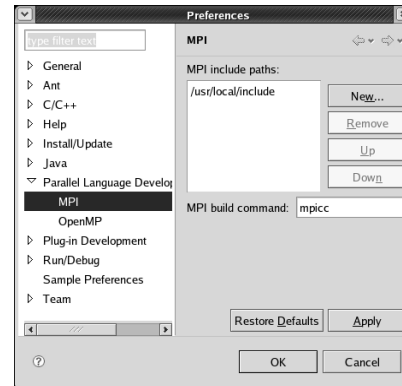

Managed Make Project Setup

✦ Create a new **C Project** **File > New > C Project**
✦ Name the project e.g. 'helloMPI' and click 'Next'
✦ After the **Select Configurations** page, you should see the **MPI Project Settings** wizard page
✦ Check **Add MPI project settings to this project** to update the project information.
✦ Change default values if necessary

✦ Currently only works on Managed Make C projects
✦ (Note: we plan to add a **New MPI Project** project type in a later version)
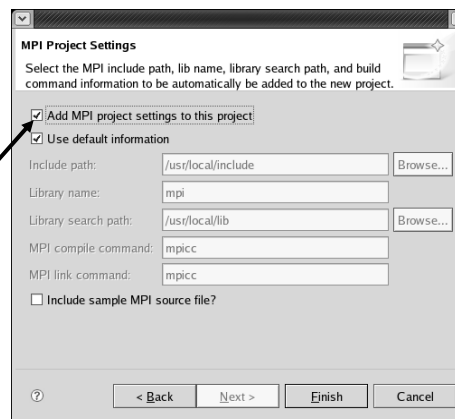

Module 4　　　　　OSCON July 2007　　　　　4-7

4

Changing the Project Properties

✦ *If* you wish to change the way your MPI program is built:
- ✦ Open the project properties
- ✦ Select **C/C++ Build**
- ✦ Select **Settings**
- ✦ Select **GCC C Compiler**
  - ✦ Change the command
- ✦ Select **GCC C Linker**
  - ✦ Change the command
- ✦ It's also possible to change compiler/linker arguments

✦ The MPI Project wizard set these for you, so it isn't necessary to change them.
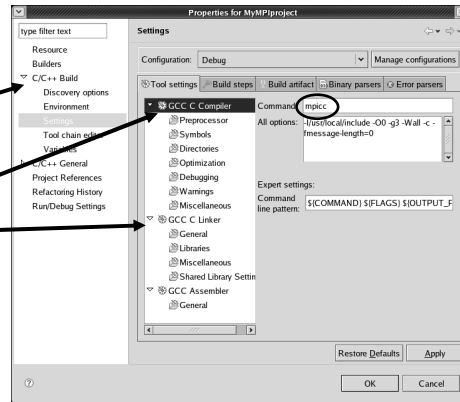

Module 4   OSCON July 2007   4-8

Content Assist

✦ Type an incomplete MPI function name e.g. "MPI_Ini" into the editor, and hit **ctrl-space**

✦ Hover over the MPI Artifact identified in the source file to see additional information about that function call, for example

Module 4   OSCON July 2007   4-9

5

Context Sensitive Help

- ✦ Press help key when the cursor is within a function name
  - ✦ Windows: **F1**
  - ✦ Linux: **ctrl-F1**
  - ✦ MacOS X: **Help**
- ✦ A help view appears (**Related Topics**) which shows additional information
- ✦ Click on the function name to see more information

Create Source File

- ✦ Create new source file called 'mpitest.c'
  - ✦ Right click on project
  - ✦ Select **New▸Source File**
  - ✦ An editor view will automatically open on the empty file
- ✦ Or, double-click on any source file in project view to open an editor on *that* file

Enter Program

✦ Type in hello world program

```
#include <stdio.h>
#include <mpi.h>
int main(int argc, char *argv[]) {
    int rank;
    MPI_Init(&argc, &argv);
    MPI_Comm_rank(MPI_COMM_WORLD, &rank);
    printf("my rank=%d\n", rank);
    MPI_Finalize();
    return 0;
}
```

✦ Try content assist (Ctrl-space)
✦ Try context sensitive help
   ✦ Win: F1   Linux: Ctrl-F1   Mac: Help key

Module 4   OSCON July 2007   4-12

Project Created and Built

✦ Save the source file
    ✦ Should build automatically
    ✦ Console shows results of build

Module 4   OSCON July 2007   4-13

7

Show MPI Artifacts (1)

- ✦ Select the source folder/file to analyze, to find the MPI artifacts
- ✦ Click the **Add MPI Artifacts** button in the tool bar to annotate source with markers
- ✦ Click the **Clear MPI Artifacts** to remove all the MPI artifacts
Module 4 OSCON July 2007 4-14

Show MPI Artifacts (2)

- ✦ Markers indicate the location of the artifacts in the editor
- ✦ In **MPI Artifact View** sort by any column (click on column heading)
- ✦ Navigate to source code line by double-clicking on the artifact
- ✦ Run the analysis on another file and its markers will be added to the view
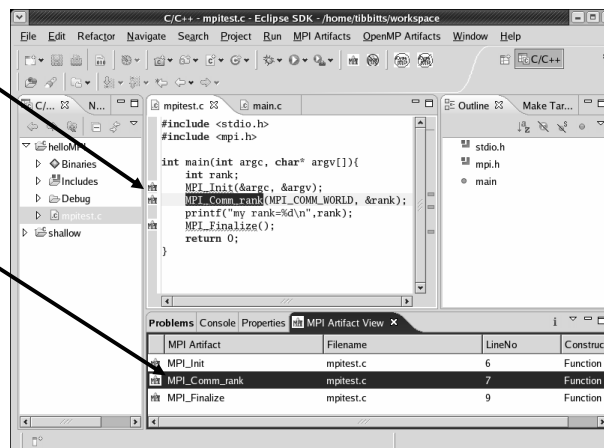

Module 4 OSCON July 2007 4-15

8

OpenMP tools

✦ Similar functions to the MPI tools
✦ Find artifacts, sort, navigate to source code
✦ Help, content assist, etc.
✦ Show #pragma regions
✦ Show Concurrency (next slide)

Module 4   OSCON July 2007   4-16

Show Concurrency

✦ Select a statement
✦ Select the context menu on the highlighted statement, and click **Show concurrency**
✦ Other statements will be highlighted in yellow
✦ The yellow highlighted statements can execute concurrently to the selected statement

Module 4   OSCON July 2007   4-17

9

PTP PLDT: MPI Barrier Analysis

Verify barrier synchronization in C/MPI programs

▪ Interprocedural static analysis.

▪ Output:
 1) For verified programs, lists barrier statements that synchronize together (match)

 2) For synchronization errors, reports counter example that illustrates and explains the error.

See PPOPP paper: Yuan Zhang and Evelyn Duesterwald. "Barrier matching for programs with textually unaligned barriers." In Proceedings of the Symposium on **Principles and Practice of Parallel Programming**, March 2007.
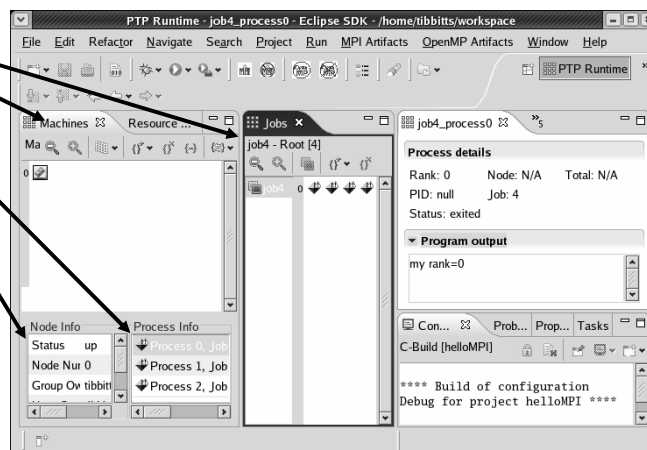

Module 4   OSCON July 2007   4-18

PTP Runtime Perspective (1)

✦ Jobs view
✦ Machines view
✦ Processes on node
✦ Node details

To see **Jobs** view *beside* (not behind) **Machines** view, drag its tab to the right until its outline occupies about half of the Machines view
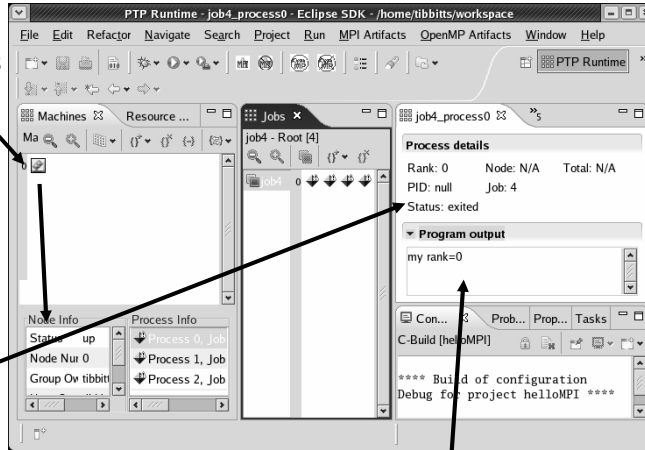

Module 4   OSCON July 2007   4-19

PTP Runtime Perspective (2)

✦ Double-click a node in machines view to see more info

✦ Hover over node or process for tooltip popup

✦ Double-click a process to see process detail

✦ Process output

Process and Job Icons

✦ Use legend icon in toolbar

Legend

Node Colors

	DOWN	Gray
	UNALLOCATED	White
	ALLOCATED TO YOU EXCLUSIVELY, BUT IDLE	
	ALLOCATED TO YOU SHARED, BUT IDLE	
	ALLOCATED TO SOMEONE ELSE EXCLUSIVELY	
	ALLOCATED TO SOMEONE ELSE SHARED	
	JOB RUNNING	
	JOB STOPPED	Green
	ERROR	Green
	UNKNOWN / UNDEFINED	Red
		White

Process Colors

	STARTING	
	RUNNING	Blue
	EXITED NORMALLY	Green
	EXITED WITH SIGNAL	Red
	STOPPED	Red
	ERROR	Yellow
		Red

Close

11

Running a Parallel Program (1)

✦ Create a parallel launch configuration:
  ✦ Open the run configuration dialog **Run▸Run...**
 ✦ Select **Parallel Application**
  ✦ Select the **New** button

Configure launch settings from this dialog:

- Press the 'New' button to create a configuration of the selected type.
- Press the 'Duplicate' button to copy the selected configuration.
- Press the 'Delete' button to remove the selected configuration.
- Press the 'Filter' button to configure filtering options.
- Edit or view an existing configuration by selecting it.

Configure launch perspective settings from the Perspectives preference page.

Module 4　　　　　OSCON July 2007　　　　　4-22

Running a Parallel Program (2)

✦ In **Main** tab, select **Browse** button to find the **Application program** (executable)
✦ Probably under **Debug** configuration
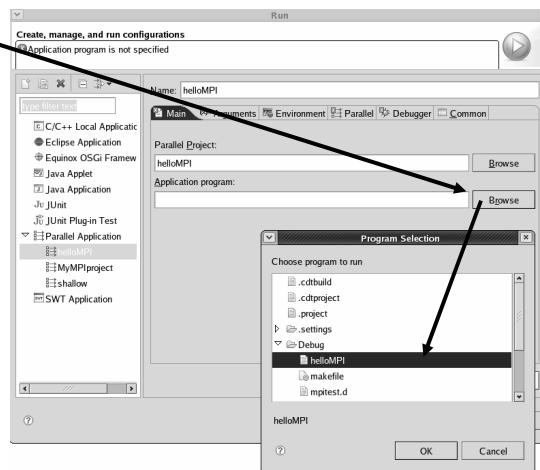

Module 4　　　　　OSCON July 2007　　　　　4-23

12

Running a Parallel Program (3)

- ✦ Select **Parallel** tab
- ✦ Enter the number of processes for this job
- ✦ 4 is a good number for this tutorial

Module 4 OSCON July 2007 4-24

Running a Parallel Program (4)

- ✦ In **Debugger** tab, select **SDM** from the **Debugger** drop-down menu
- ✦ Select **Run** button to launch the application

Module 4 OSCON July 2007 4-25

Viewing Program Output

+ Double-click on process 0 (diamond icon) in the jobs view
+ Standard output will be visible in process detail view
+ Double-click on other processes to see their stdout

Module 4   OSCON July 2007   4-26

14

Module 5: Parallel Debugging

✦ Objective
  ✦ Learn the basics of debugging parallel programs with PTP
✦ Contents
  ✦ Launching a parallel debug session
  ✦ The PTP Debug Perspective
  ✦ Parallel Breakpoints
  ✦ Current Instruction Pointer
  ✦ Process sets: controlling sets of processes
 ✦ Process registration: controlling individual processes

---

The PTP Debug Perspective (1)

✦ **Parallel Debug** view shows currently running jobs, including the processes in the current process set

✦ **Debug** view shows threads and call stack for individual registered processes

✦ **Source** view shows the current instruction pointer for all processes

1

The PTP Debug Perspective (2)

+ **Breakpoints** view shows breakpoints that have been set (more on this later)
+ **Variables** view shows the current values of variables for the currently selected process in the **Debug** view
+ **Outline** view (from CDT) of source code

---

Process Sets (1)

+ Traditional debuggers apply operations to a single process
+ Parallel debugging operations apply to a single process or to arbitrary collections of processes
+ A process set is a means of simultaneously referring to one or more processes

Job 1   Job 2

2

Process Sets (2)

✦ When a parallel debug session is first started, all processes are placed in a set, called the **Root** set
✦ Sets are always associated with a single job
✦ A job can have any number of process sets
✦ A set can contain from 1 to the number of processes in a job

Job 1   Job 2

Module 5   OSCON July 2007   5-4

Operations on Process Sets

✦ Use the icons in the toolbar of the **Parallel Debug** view to create, modify, and delete process sets, and to change the current process set
✦ Current process set is listed next to job name along with number of processes in the set
✦ Debug operations on the **Parallel Debug** View toolbar always apply to the current set:
  ✦ Resume, suspend, stop, step into, step over, step return

Create/add to set   Remove from set

Delete set   Change current set
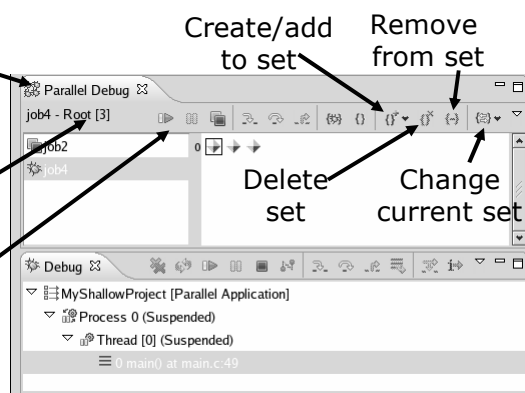

Module 5   OSCON July 2007   5-5

Breakpoints

✦ Two types of parallel breakpoints
✦ Global breakpoints
  ✦ Apply to all processes, all jobs
✦ Set Breakpoints
  ✦ Apply only to processes in a particular set (which can include the root set) for a single job
  ✦ When the job completes, the breakpoints are no longer available
✦ Set breakpoints are colored depending on which processes the breakpoint applies to:
  ✦ Green indicates the breakpoint set is the same as the current set.
  ✦ Blue indicates some processes in the breakpoint set are also in the current set (i.e. the process sets overlap)
  ✦ Yellow indicates the breakpoint set is different from the current set

Module 5   OSCON July 2007   5-6

Setting Breakpoints

✦ To create a set breakpoint
  ✦ Make sure the current job is selected
  ✦ Select the root process set, or any other set
  ✦ Double-click on the left edge of an editor window, at the line on which you want to set the breakpoint
  ✦ Or, right click and use the context menu

✦ To create a global breakpoint
  ✦ First make sure that no jobs are selected (click in white part of jobs view if necessary)
  ✦ Double-click on the left edge of an editor window
  ✦ Note that if a job is selected, the breakpoint will apply to the current set

Module 5   OSCON July 2007   5-7

4

Breakpoint Information (1)

✦ Hover over breakpoint icon
  ✦ Will show the sets this breakpoint applies to
✦ Select **Breakpoints** view
  ✦ Will show all breakpoints in all projects

Breakpoints ✕ Variables Array View Expressions

☑ helloMPI.c [line: 25] {Global:Root}
☑ helloMPI.c [line: 28] {job2:set1}
☑ helloMPI.c [line: 29] {job2:set31}
☑ helloMPI.c [line: 32] {job2:set2}

Module 5   OSCON July 2007   5-8

Breakpoint Information (2)

✦ Use the menu in the breakpoints view to group breakpoints by type
✦ Breakpoints sorted by breakpoint set (process set)

Breakpoints ✕ Variables Array View Expressions

▽ ☑ Root
   ☑ helloMPI.c [line: 25] {Global:Root}
▽ ☑ set1
   ☑ helloMPI.c [line: 28] {job2:set1}
▽ ☑ set2
   ☑ helloMPI.c [line: 32] {job2:set2}
▽ ☑ set31
   ☑ helloMPI.c [line: 29] {job2:set31}

PTP Debug
Breakpoints ✕ Variables Array View Expressions

☑ helloMPI.c [line: 25] {Global:Root}
☑ helloMPI.c [line: 28] {job2:set1}
☑ helloMPI.c [line: 29] {job2:set31}

Module 5   OSCON July 2007   5-9

5

Process Registration (1)

- ✦ Process set commands apply to groups of processes
- ✦ For finer control and more detailed information, a process can be registered and isolated in the Debug View
- ✦ Registered processes, including their stack traces, appear in the **Debug** view
- ✦ Any number of processes can be registered, and processes can be registered or un-registered at any time

Process Registration (2)

- ✦ To register a process, double-click its process icon in the **Parallel Debug** view
- ✦ Note that the process icon is surrounded by a box
  - ✦ The process appears in the debug view.
- ✦ To un-register a process, double-click on the same process icon
- ✦ Debug commands in the **Debug** view control the single process that is currently selected in that view

Registered processes

Debug commands apply to the Currently selected process

Registered processes appear in Debug view
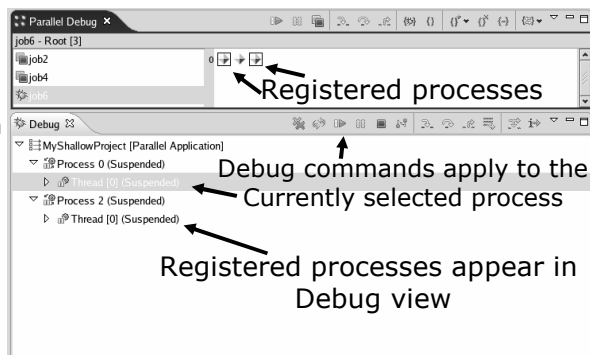

Parallel Debug View– debug commands control *groups* of processes

Debug View – debug commands controls *single* processes (*registered* processes)

Current Instruction Pointer (1)

✦ The current instruction pointer is used to show the current location of suspended processes
✦ In traditional programs, there is a single instruction pointer (the exception to this is multi-threaded programs)
✦ In parallel programs, there is an instruction pointer for every process
✦ The PTP debugger shows one instruction pointer for every group of processes at the same location

---

Current Instruction Pointer (2)

```
    /* find out process rank */
    MPI_Comm_rank(MPI_COMM_WORLD, &my_rank);

    /* find out number of processes */
    MPI_Comm_size(MPI_COMM_WORLD, &p);
```
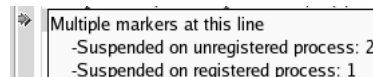

✦ The highlight color depends on the stack frame:
  ✦ **Green:** Registered Process
  ✦ **Brown:** Unregistered Process
  ✦ **Blue:** Tracks current stack frame

Multiple processes marker

Registered process marker

Un-registered process marker

✦ The marker depends on the type of process stopped at that location

✦ Hover for more details about the processes suspend at that location

Multiple markers at this line
-Suspended on unregistered process: 2
-Suspended on registered process: 1

7

Terminating a Debug Session

✦ Click on the terminate icon in the **Parallel Debug** view to terminate all processes
✦ Click on the terminate icon in the **Debug** view to terminate the currently selected process
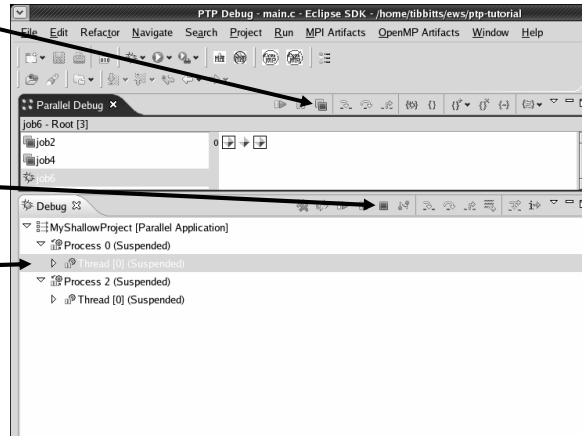

Basic Debug Commands

1. or   2.   3.

1. Launch debug session
   ✦ Using helloMPI program
   ✦ Use same launch configuration used for running
2. Step Over
3. Watch variable change
4. Set a breakpoint
5. Run to breakpoint

5.

4.

```
#include <stdio.h>
#include <mpi.h>

int main(int argc, char* argv[]){
    int rank;
    MPI_Init(&argc, &argv);
    MPI_Comm_rank(MPI_COMM_WORLD, &rank);
    printf("my rank=%d\n",rank);
    MPI_Finalize();
    return 0;
}
```
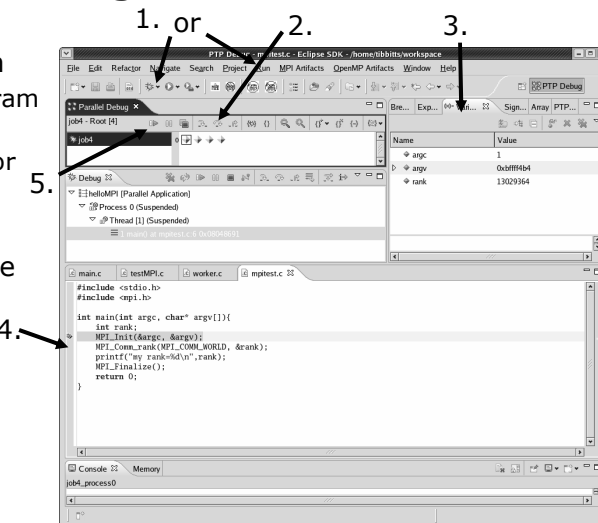

Debug Actions on Processes and Process Sets

1. Register a (different) process
2. Step the registered process
3. Create a process set (select process icons first)
4. (a) step and (b) run the set
5. Terminate debug session

Module 5　　　　　　　　OSCON July 2007　　　　　　　　5-16

parallel tools platform
http://eclipse.org/ptp
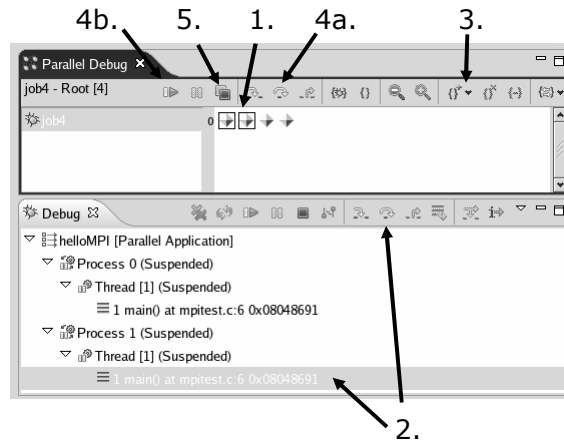

Module 6: Eclipse and the Enterprise

✦ Objective
  ✦ How Eclipse can benefit enterprise development
  ✦ Learn about other tools related to PTP
  ✦ PTP upcoming features
✦ Contents
  ✦ Links to other tools, including performance tools
  ✦ Planned features for new versions of PTP
  ✦ Additional documentation

---

parallel tools platform
http://eclipse.org/ptp

Existing Enterprise Features

✦ Distributed development
  ✦ CVS, Subversion
  ✦ Commercial (e.g. ClearCase)
✦ Complete development lifecycle coverage
  ✦ Design (UML), edit, debug, test, etc.
✦ Code refactoring
✦ Rich client platform (RCP)
  ✦ Application framework

Trends in Enterprise Computing

✦ Limited exploitation of parallelism to date
  - ✦ Instruction level parallelism (on chip)
  - ✦ Symmetric multiprocessing (off chip)
  - ✦ Multi-core (2-4 cores)
✦ Significant parallelism now in reach of the Enterprise
  - ✦ Clusters (e.g. server farms) + cheap interconnect (e.g. Infiniband)
  - ✦ Manycore (8+ cores)
  - ✦ Compute off-load (e.g. GPGPUs)
  - ✦ Hybrid architectures (e.g. Cell)

How will PTP help?

✦ Until new programming models/languages become available
  - ✦ Better tools to support explicit parallelism (e.g. MPI, OpenMP, threads)
  - ✦ Simplify interaction with parallel systems
  - ✦ Provide parallel debugging support
✦ Once new programming models/languages are available
  - ✦ Integrate parallel languages with IDE
  - ✦ Provide new tools to aid the developer

PTP-Related Tools

✦ TAU – Tuning and Analysis Utilities
  ✦ http://www.cs.uoregon.edu/research/tau
  ✦ Eclipse plug-in integrates external performance tool instrumentation for PTP
✦ Performance Visualization: TuningFork
  ✦ Performance visualization Eclipse plug-ins from IBM Research
  ✦ Available on alphaWorks now
  ✦ http://www.alphaworks.ibm.com/tech/tuningfork
  ✦ Enhancements for parallel computing underway
✦ Upcoming: Performance framework for PTP

TAU
(Tuning and Analysis Utilities)
Demo presented by Wyatt Spear, wspear@cs.uoregon.edu
http://www.cs.uoregon.edu/research/**tau**/

✦ TAU Features
  ✦ Highly scalable and portable: works on numerous operating systems and architectures
  ✦ Supports many data collection and analysis options, including hardware counters, callpath profiling and memory profiling
  ✦ Allows output and conversion of performance data to several trace and profile formats
✦ TAU Eclipse Plug-ins
  ✦ Simple configuration of TAU instrumentation and data collection options
  ✦ Automatic 'one-click' instrumentation, compilation, execution and data-collection
  ✦ Profile database and analysis tools integrated with Eclipse, including source callback

Useful Eclipse Tools

✦ CDT – C/C++ Development Tools
  ✦ http://eclipse.org/cdt
✦ TPTP – Testing and Performance Tools Platform
  ✦ http://eclipse.org/tptp
✦ Python
  ✦ http://pydev.sourceforge.net
✦ Subversion (CVS replacement)
  ✦ http://subclipse.tigris.org
✦ … and many more!

PTP Upcoming Features (1)

✦ PTP 2.0 (late 2007 / early 2008)
  ✦ Resource management
    ✦ Support for viewing of jobs in queues
    ✦ View and query the status of queues
    ✦ Submit and control jobs
    ✦ Resource managers supported
      ✦ Possibly SLURM, LoadLeveler , LSF, MOAB ?
  ✦ Additional runtime support for MPICH2 improved
  ✦ PLDT enhancements – PLDT 2.0
    ✦ MPI barrier analysis – to detect possible deadlocks
    ✦ PLDT 2.0 early access builds are available
    ✦ Requires CDT 4.0 and Eclipse 3.3 (Europa)

PTP Upcoming Features (2)

✦ PTP 2.0 – (late 2007 / early 2008)

    ✦ Remote services support
        ✦ Allow projects to reside on remote systems
        ✦ Ability to build projects remotely
        ✦ Ability to launch and debug projects remotely

    ✦ Debugger improvements

PTP Upcoming Features (3)

✦ PTP Performance Analysis Framework
    ✦ Goal: Integrate Instrumentation, Measurement, and Analysis for a variety of tools
    ✦ http://wiki.eclipse.org/index.php/PTP/designs/perf

PTP Tutorial Feedback

- ✦ Please complete feedback form
- ✦ Your feedback is valuable!

Thanks for attending
We hope you found it useful

6

Appendix: Installing Eclipse

✦ Objective
  ✦ To learn how to install Eclipse
  ✦ To install Eclipse on your laptop
  ✦ This is an optional module
✦ Contents
  ✦ Software prerequisites
  ✦ Installing Eclipse
  ✦ Installing CDT
  ✦ (Installing all of PTP is beyond the scope of this tutorial)

Software Prerequisites

✦ Java (1.5 or later)
✦ For Windows: Cygwin or MinGW
✦ make, gcc, and gdb (or other vendor compilers)
✦ gfortran (only required for Fortran support)
✦ OpenMPI or MPICH2 (only required for PTP Runtime)

✦ Note: for Windows, an easier solution is to install the "Wascana" package of Eclipse CDT for windows, available on the tutorial CD or at:
  ✦ http://wascana.sourceforge.net/
  ✦ That's all you need; ignore the rest of this section!

1

Pre-installation Overview

	Eclipse	C/C++/Fortran		Fortran	PTP
	Java	Cygwin	make/gcc /gdb	gfortran	OpenMPI
Windows	install	install		install	
Linux	install		install	install	build & install
MacOS X	update			install	build & install

Java Installation

✦ Download Sun or IBM versions
   ✦ Only need Java runtime environment (JRE)
   ✦ Java 1.5 is the same as JRE 5.0
✦ Latest Sun JRE is in the java folder on tutorial CD:
   ✦ jre-1_5_0_08-windows-i586-p.exe
   ✦ jre-1_5_0_08-windows-amd64.exe
   ✦ jre-1_5_0_08-linux-i586.bin
   ✦ jre-1_5_0_08-linux-amd64.bin
   ✦ J2SE50Release3.dmg

Java Installation (Linux)

✦ Open a terminal window
✦ Mount your CDROM if necessary

```
mount /media/cdrom
```

✦ Enter the commands below:
  ✦ Replace *cdrom* with the location of your CDROM (usually `/media/cdrom`) and *arch* with your computer architecture (usually `i586`)

```
cd
cdrom/java/jre-1_5_0_08-linux-arch.bin
```

  ✦ hit space until you are asked to agree to license, then enter 'yes')

```
PATH=~/jre1.5.0_08/bin:$PATH
```

✦ Add to your PATH in your login file if required

Java Installation (MacOS X)

✦ Check Java version
  ✦ Open **/Applications/Utilities/Terminal**
  ✦ Enter the command:

```
java -version
```

✦ If java version is not "1.5.0_NN" or similar
  ✦ From the Finder, open **TutorialCD**
  ✦ Open the java folder
  ✦ Double-click on the **J2SE50Release3.dmg** disk image
  ✦ Open the mounted disk and double-click on the Installer icon and follow instructions
  ✦ Open the Java Preferences Utility in **/Applications/Utilities/Java/J2SE 5.0/**
  ✦ Set the **Java Applet Runtime Settings** to use version J2SE 5.0

Java Installation (Windows)

✦ Open the **TutorialCD** in **My Computer**
✦ Open the **java** folder
✦ Double-click on **jre-1_5_0_08-windows-*arch***
  ✦ Replace ***arch*** with your computer architecture (most likely **i586-p**)
✦ Follow installer wizard prompts
  ✦ Accept default options

Eclipse Installation Overview

	Eclipse SDK	CDT Feature	PTP Feature	PTP Runtime
Windows	install	update	update	N/A
Linux	install	update	update	build & install
MacOS X	install	update	update	install

parallel tools platform
http://eclipse.org/ptp

Eclipse Installation

✦ The base component of Eclipse is known as the Eclipse SDK
✦ The Eclipse SDK is downloaded as a single zip or gzipped tar file
✦ Unzipping or untarring this file creates a directory containing the main executable
✦ Copies of the Eclipse SDK for each operating system type are located in the **eclipse** folder on the tutorial CD

---

parallel tools platform
http://eclipse.org/ptp

Eclipse SDK Installation (Linux)

✦ Open a terminal window
✦ Mount CDROM if not already
✦ Enter the commands below:
  ✦ Replace *cdrom* with the location of your CDROM (usually **/media/cdrom**)
  ✦ If your machine is *not* x86 based, use either the **-ppc** or **-x86_64** versions (not on CDROM)

```
cd
tar -zxvf cdrom/eclipse/eclipse-SDK-3.3-linux-gtk.tar.gz
```

Eclipse SDK Installation (MacOS X)

✦ From the Finder, open **TutorialCD**
✦ Open the **eclipse** folder
✦ Double-click on **eclipse-SDK-3.3-macosx-carbon.tar.gz**
✦ Will create new eclipse folder in your **downloads** location
    ✦ Specified in Safari
✦ Drag new **eclipse** folder to **Applications** (or wherever you want to install it)

Eclipse SDK Installation (Windows)

✦ Open the **TutorialCD** in **My Computer**
✦ Open the **eclipse** folder
✦ Unzip the following file:

    eclipse-SDK-3.3-win32.zip

✦ Choose a location on your hard drive where you want to install Eclipse (e.g. C:\)
    ✦ An **eclipse** folder will be created at this location

Starting Eclipse

+ **Linux**
  + From a terminal window, enter

  ```
  cd
  eclipse/eclipse &
  ```
+ **MacOS X**
  + From finder, open the **Applications▸eclipse** folder
  + Double-click on the **Eclipse** application
+ **Windows**
  + Open the **eclipse** folder
  + Double-click on the **eclipse** executable

+ Accept default workspace when asked
+ Select workbench icon from welcome page

Adding Features

+ New functionality is added to Eclipse using features
+ Features are obtained and installed from an update site (like a web site)
+ Features can also be installed manually by copying files to the features and plugins directories in the main eclipse directory
+ Eclipse 3.3 comes preconfigured with a link to the Europa Discovery Site that contains a large number of features
  + Europa projects are guaranteed to work with Eclipse 3.3

Installing Eclipse Features
with an Update Site

✦ Two types of sites: remote and local
  ✦ Archive Site is a local site packaged as a zip or jar file
✦ Remote Site requires Internet access
✦ To install CDT via a Remote Site:
  ✦ Choose **Help▸Software Updates▸Find and Install…**
  ✦ Select **Search for new features to install**
  ✦ Click **Next >**
  ✦ Check **Europa Discovery Site**
  ✦ Click **Finish**
  ✦ Select a Mirror site if asked
  ✦ In the resulting Updates dialog, expand "Europa Discovery Site" and check "C and C++ Development"
  ✦ Click Next, accept license agreement terms, Next, Finish.
  ✦ When done downloading, Select "Install All"
  ✦ When prompted to restart eclipse, answer "Yes"

Appendix   OSCON July 2007   A-14

Installing Eclipse
from the Web

✦ Download Eclipse
  ✦ http://eclipse.org/downloads

✦ Download the Eclipse SDK for your platform
  ✦ If you don't need Java or plug-in development, you might install just the Eclipse "Platform."
    ✦ Eclipse *Platform* is "bare bones"
    ✦ Eclipse *SDK* includes Java and plug-in development tools
  ✦ Unzip or untar on your machine
  ✦ This is just the base Eclipse.
    CDT/PTP install covered separately.
✦ Launch eclipse
  ✦ From <install-dir>/eclipse/eclipse   *executable*
  ✦ Or from command line: `eclipse &`

Appendix   OSCON July 2007   A-15

Installing

continued

✦ **After launching eclipse,**
- ✦ Help > Software Updates > Find and install
- ✦ Select other features to install
- ✦ If any "red X's" indicated pre-reqs, click "Select required" button to select them.
- ✦ For CDT and PTP install information, see http://www.eclipse.org/ptp/docs/install.html and follow directions at least through CDT install.
- ✦ Restart eclipse after CDT installation, as prompted
